Technology · Software · Digital Transformation

A trusted technology delivery partner for public organizations, large private enterprises, and international clients.

Poshtibanan Pardazesh Aseman is a software and digital technology company with extensive experience in designing, developing, deploying, and supporting business and public-sector information systems. Our teams combine **business analysis, product thinking, UX/UI, software engineering, infrastructure**, and long-term technical support to deliver complete solutions — not just code.

15+ Years
SOFTWARE & DIGITAL TECHNOLOGY EXPERIENCE

Public & Private
ENTERPRISE & GOVERNMENT PROJECTS

WHY ORGANIZATIONS WORK WITH US

- End-to-end delivery: from requirements and architecture to development, deployment, training, and support.
- Business-first engineering: we translate operational problems into practical digital systems.
- Complex-environment experience: public-sector workflows, enterprise operations, multi-role systems, and high-volume information.
- Flexible partnership model: we can act as the technical delivery team behind a consulting, sales, or business-development partner.

CAPABILITIES

A Multidisciplinary Technology Team

Covering the full lifecycle of digital products and enterprise systems — from architecture and engineering to product strategy and continuous improvement.

Software Engineering

- Custom web applications
- Windows & desktop applications
- Mobile applications
- API & system integration
- Database-driven systems
- Scalable backend architecture

Product & Business

- Business analysis
- Requirements engineering
- Product strategy & roadmaps
- Process digitization
- System architecture & solution design
- Technical project leadership

Enterprise & Organizational Systems

- CRM · ERP · HRM · MIS
- Workflow & operations management
- E-commerce & B2B/B2C platforms
- Customer & member portals
- Online examination & certification
- Production & operational systems

Digital Transformation

- e-Government platforms
- UX/UI & service design
- Digital identity & domain-related systems
- Modernization of legacy workflows
- Data-driven dashboards
- Security, maintenance & continuous improvement

Selected Solution Domains

Public Sector & e-Government

Citizen-facing services, organizational portals, registration workflows, secure access, document and process management.

Legal & Professional Organizations

Member portals, registration, document submission, events, communications, and administrative systems.

Commerce & Trade

E-commerce, B2B platforms, marketplaces, customer management, digital marketing infrastructure.

Education & Certification

Learning platforms, online exams, certification workflows, training management.

Business Operations

CRM, HRM, ERP/MIS, production management, dashboards, reporting and workflow automation.

Digital Products

Product discovery, MVP development, web/mobile platforms, UX/UI and iterative improvement.

PROJECT EXPERIENCE

Government, Enterprise & International Engagements

Our project experience spans customers and partners connected to Switzerland, Germany, the UAE, Türkiye, and the Netherlands, alongside extensive delivery for organizations in Iran.

MARKET	EXPERIENCE
Switzerland	International software / digital solutions
Germany	International software / digital solutions
United Arab Emirates	Business and digital technology projects
Türkiye	Digital marketing, technology and consulting engagements
Netherlands	Technology, product and digital platform collaboration

Representative Project Categories

- Government and provincial digital portals serving large professional and citizen communities
- Enterprise software systems covering CRM, ERP/MIS, HR, operational workflows, reporting, and customer services
- Websites and digital platforms for professional associations and public institutions
- B2B/B2C marketplaces and e-commerce platforms
- Digital identity, domain-management, and related online infrastructure
- Production-line and business operations management systems
- Online examination, education, training, and certification platforms
- Mobile and web applications with integrated databases and administrative panels
- Digital marketing, SEO, Google Ads, analytics, and conversion-oriented digital operations

Delivery Approach

We can operate as an extended technical team for a partner: the partner manages the commercial relationship and client-facing business development, while our team handles analysis, solution architecture, UX/UI, development, testing, deployment, documentation, and post-launch support. The model can be adapted to white-label delivery, joint delivery, subcontracting, or a long-term technology partnership.

WHY PARTNER WITH US

Built to Help Partners Deliver More

A delivery organization designed to help partners take on larger and more technically demanding projects.

01 **Technical Depth**

A multidisciplinary team spanning software engineering, product, UX/UI, databases, infrastructure and digital operations.

02 **Business Understanding**

We work from business requirements and operational workflows — not only technical specifications.

03 **Project Ownership**

From discovery to deployment and support, we can own the technical delivery lifecycle.

04 **Long-Term Support**

Our engagement model includes post-implementation support, maintenance, extensions and continuous improvement.

05 **Flexible Collaboration**

Joint delivery, subcontracting, white-label development or a dedicated technical delivery partnership.

> *"We don't simply provide development capacity. We take responsibility for turning complex requirements into reliable digital systems.*
